(57)   **ABSTRACT**

Embodiments are described for displaying indications of notifications received by a multi-screen device. The notifications may relate to a number of different categories including, without limitation, phone calls, SMS messages, email, notifications from applications, battery level, and signal strength. The multi-screen device includes a unified desktop that displays indications of the notifications regardless of the state of the multi-screen device, which in embodiments includes an undocked state and a docked state, in which a peripheral screen is used to display the indications. The indications may be displayed differently depending on the state of the multi-screen device.
